SOFTWARE ENGINEERING & TECHNICAL LEADERSHIP

Piaseczno, Poland | +48 537 391 349 | tobiasdu303@gmail.com

legatia.github.io | github.com/legatia

Head of Software Engineering with hands-on work across Rust and Go systems, AI products, and blockchain infrastructure. Combines technical delivery, QA experience, and Mandarin-English client communication to move projects from architecture through implementation.

SELECTED ENGINEERING PROJECTS

Zyn | Rust | Virtual machines | Zcash

- Developed a reusable microchain execution layer that separates application logic from sequencing, checkpoints, settlement and recovery.
- Implemented deterministic state transitions, Merkle commitments, signed intents and conformance checks for replay, serialization and value conservation.

Levu & Roda | Go | Rust | Solidity

- Contributed to Levu, a perpetual-futures exchange with liquidity-based leverage limits, oracle aggregation, margin allocation and a paper-trading interface.
- Roda provides per-market execution with a deterministic Rust VM, Go sequencer, checkpoint data availability and Solidity withdrawal verification.

Genara | TypeScript | Next.js | PostgreSQL

- Built a fungal simulation product with separate web, game, mobile field-observation and platform applications.
- Centralized simulation outcomes, APIs, checkout settlement and data migrations in a shared backend; added private field records and review workflows.

LiveSignal | WebMCP | Browser extension | AI tooling

- Built a shared video-research workspace with 37 semantic tools for agent-operated research, timestamped evidence and editable reports.
- Integrated caption retrieval and optional real-time transcription, keeping evidence synchronized between the browser adapter and visible workspace.

01Barter / Barterium | TypeScript | Hono | Solidity

- Led intent-based exchange work under 0x01, covering a marketplace, API, typed SDK and bilateral EVM settlement contracts.
- Implemented scoped agent mandates, replay protection and EIP-712 consent; settlement requires approval from the asset owners.

Registrai / Arc | Solidity | TypeScript SDK | Next.js

- Built bonded oracle-agent infrastructure with signed attestations, dispute handling and a reference Warsaw real-estate feed.
- Separated protocol contracts, a runtime-agnostic agent SDK, reference agent and frontend into reusable repositories.

Sylla | MCP | PostgreSQL | Solana / Anchor

- Built a portable personal-agent layer with approved memory, OAuth-authenticated tools and durable task orchestration across model clients.
- Implemented seven Solana programs covering reserves, bounded agent spending, governance records, attestations and escrow.

Tobias Du

PROFESSIONAL EXPERIENCE

InfinityTech | Head of Software Engineering

Mar 2026 - Present

Poland / Remote. Lead software development projects and coordinate technical communication with Chinese clients.

WE17 | Android Telecom QA

Jul 2024 - Mar 2025

Warsaw / Central Europe. Performed field QA on Android telecom devices and coordinated regional projects.

Testronic | Localisation QA Tester

Mar 2024 - Jul 2024

Warsaw. Tested and reported localisation defects; communicated findings with clients.

Memehouse | Manager / Development Assistant

Sep 2022 - Sep 2023

Seattle / Remote. Supported frontend development, product growth and customer service.

ADDITIONAL PROJECTS

Schola. Adaptive education product with parent-approved feedback, separate parent/study mobile apps, household records and an academy evidence ledger.

Lanesra. Extended the open-source Elmo platform with Web3 answer-engine tracking, citation diagnostics, audits and before/after implementation measurement.

OnTable. SwiftUI decision-support app with on-device MLX inference, SQLite storage and nearby peer-to-peer collaboration.

LAMP / Midnight. Community startup-launch project with Compact contracts, private participation and milestone-funding workflows.

Rondo. Contributed to an elder-support product combining its Polish landing page and family dashboard for coordinating care and support.

PartTimer. Contributed to an NFT-linked launchpad with Solidity escrow, Uniswap v4 hooks, fee accounting and time-bound NFT custody.

Customer Intelligence Manager. Built a Convex-based agent for customer-signal monitoring, evidence-backed investigations, prioritization and email follow-up.

Provo / Sibyl. Built a project-intelligence desk combining persistent Sibyl memory, evidence-backed verdicts and x402 report payments.

0x01 Treasury Watch. Built a Solana treasury-monitoring agent with wallet-flow classification, evidence cards and periodic digests.

TECHNICAL SKILLS

Languages: TypeScript, Rust, Python, Go, Solidity, Swift

Engineering: React / Next.js, APIs, PostgreSQL, Convex, MCP / WebMCP, deterministic systems, smart contracts, mobile and localisation QA

Leadership: Technical project delivery, client communication, regional coordination

EDUCATION & LANGUAGES

Warsaw University of Technology - Bachelor's degree, Mechatronics / Automotive Engineering

Mandarin Chinese: Native | **English:** C1, professional | **Polish:** A2, conversational
